

Portable Personal Information Management System

A unified record-keeping tool for lifetime management, presentation, and exchange of information — individuals can permanently manage and exchange their information online.

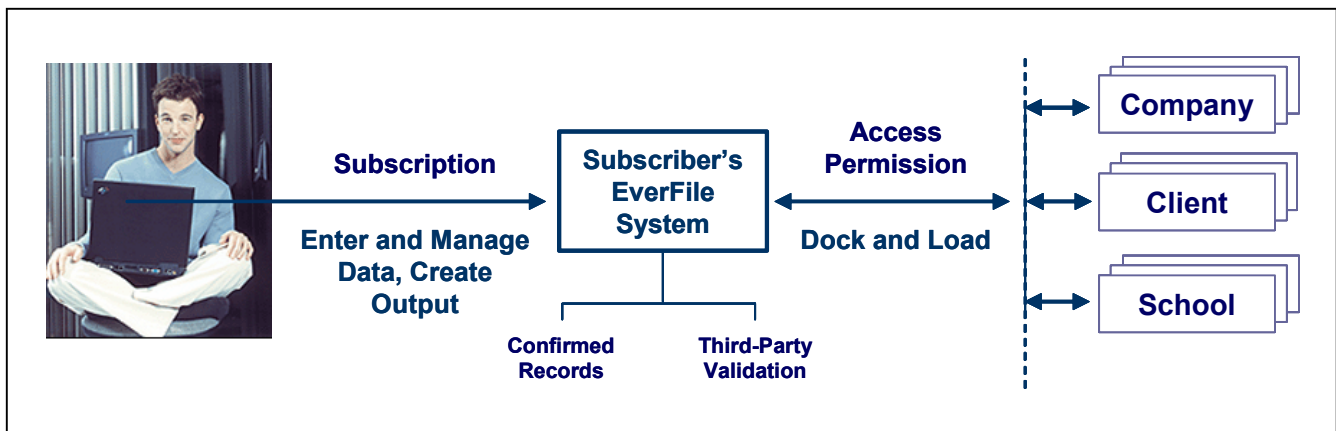

EverFile solves a common problem for today's knowledge workers. These independent individuals are often not able to gather accurate information as they move, or to consolidate it into a unified record. They also have a problem managing an array of information that is fragmented across a variety of separate, non-compatible information management tools.

If skills are portable, then information that "belongs" to individuals should be just as portable. If worker resources must be fluid in today's competitive world, then workers should be able to build, carry and provide their own secure information wherever they go.

With EverFile, information moves to and stays with the individual who needs it to present skills, knowledge, experience, and achievements to prospective employers, clients, schools, associations, or any other type of organization. All information is in one place – in a comprehensive easy-to-use system, under the control of the subscriber.

We offer a long-term value proposition for the interlocking needs of individuals and organizations.

The EverFile system is ideal for employers, for example, that want to cross-check records of re-hires, adopt a standard record-keeping format to create a uniform data structure used by employers that hire out of the same talent pool, or cut costs by using the EverFile subscription-based system to replace internal systems with a Software as a Service solution.

For Individuals

- Individuals can start their own subscriptions and enter data and files. They can authorize others to upload confirmed data such as references or work samples, and pay firms to do background checks and validate selected data. By pre-validating key records, subscribers reduce costs for the organizations they approach.
- Utilities help subscribers create, store, and share a variety of outputs such as resumes, reference lists, and portfolio elements.
- Subscribers can "dock" to exchange information with participating organizations.
- Subscription pricing starts at \$8 per month for individuals, with multiple year discounts.

For Organizations

- The EverFile system helps employers, for example, manage a flexible, mobile workforce, improve quality and consistency of records, and reduce record-keeping costs.
- Employers can save money by requesting and accepting EverFile Pre-validated records or job applications. Background checks are simplified or even eliminated.
- EverFile can be offered as a fully or partially paid benefit so individuals can manage their own records and career development.
- Organizations receive volume discounts based on headcount. Branded portals and site licenses are available.

EverFile's Main Navigation Console

With a powerful assortment of storage, document creation/output, and data exchange utilities, EverFile subscribers can manage a cumulative, integrated lifetime record — and share required information with authorized individuals and organizations. Subscribers can track where information is sent and maintain multiple versions of material for fast and easy re-use — an advantage when working on the Internet.

Personal Profile Manager

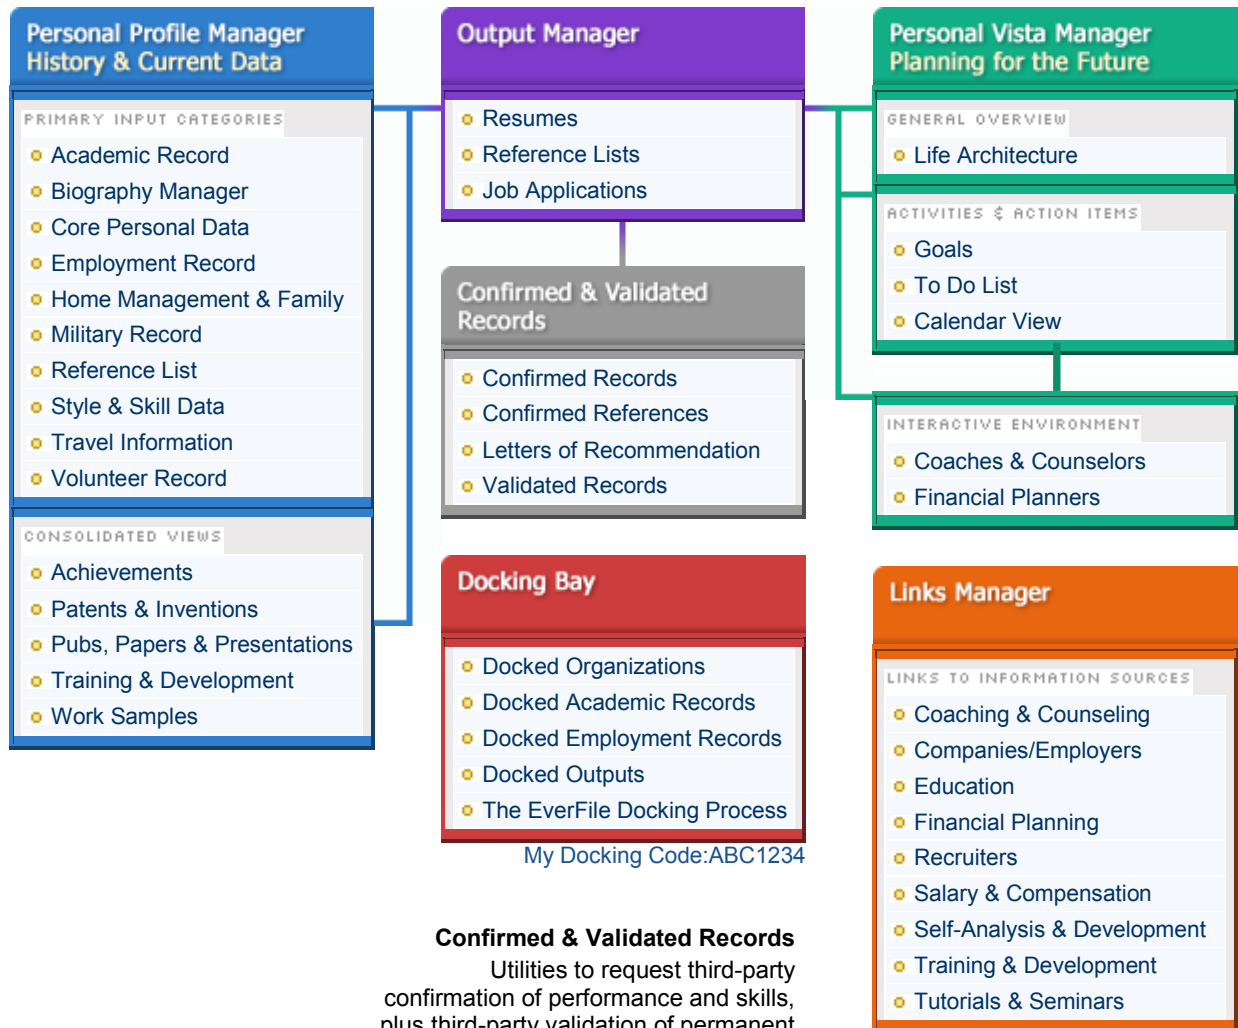

Structured storage for data and files. Consolidated Views summarize information.

Output Manager

Utilities to create a variety of documents and forms, and store them permanently.

Personal Vista Manager

Utilities to support career planning and personal development.

Confirmed & Validated Records
Utilities to request third-party confirmation of performance and skills, plus third-party validation of permanent key records.

Docking Bay
Utilities to exchange information with employers, schools, and other organizations. Enables upload and download of data.

Links Manager
Resources help subscribers get in touch with vendors that support career development and planning.
